OPERATIONS & RECONCILIATION MANUAL

POS Cashier Shift Control & Daily Reconciliation

A rigorous operational protocol covering cashier opening floats, split tenders, blind end-of-day reconciliation, variance audits, and cash drawer security.

CLASSIFICATION	Store Operations	RELEASE VERSION	v2.4.0 (Enterprise)
AUTHOR / TEAM	Nexus Retail Operations Group	EFFECTIVE DATE	October 2026
TARGET AUDIENCE	Cashiers, Shift Supervisors, Store Accountants	STATUS	Official Production Ready

1. Core Principles of Shift Integrity

In modern retail and wholesale environments, the point-of-sale register represents the primary interface for revenue capture. The Nexus POS Shift Management subsystem enforces strict accountability, ensuring that every rupee received is reconciled against physical cash, credit card terminals, and bank transfers.

2. Shift Opening Protocol: The Floating Drawer

A cashier may never begin ringing sales on an uninitialized shift. The opening procedure ensures a verified opening balance:

Step 1: The cashier signs into the assigned terminal using their personal user credentials.

Step 2: The system prompts: **'Initialize New Sales Shift'**. Enter the exact physical cash float provided by the manager (e.g., LKR 10,000 in petty change notes and coins).

Step 3: The terminal prints an **Opening Float Slip**. Both the cashier and the authorizing supervisor sign the physical slip and deposit it into the cash drawer under the till tray.

> **Mandatory Denomination Counting**
>
> Always record opening floats by individual denominations (e.g., 5x LKR 1,000, 8x LKR 500, 10x LKR 100). This eliminates disputes during mid-shift handovers.

3. Transaction Processing & Split Payments

Nexus POS supports multi-tender split settlement across single invoices. Cashiers must ensure payments are recorded under their precise monetary channel:

Payment Method	Verification Requirement	Receipt Output	Reconciliation Channel
`Cash (LKR)`	Note inspection & UV fraud check	Change calculation displayed	Physical cash drawer count
`Credit / Debit Card`	Bank POS terminal approval slip	Card type & last 4 digits on bill	Bank settlement batch total
`LankaQR / Transfer`	Reference number & SMS alert match	Transaction reference on bill	Direct bank account ledger
`Customer Credit`	Customer profile limit & authorization	Credit ledger invoice signed	Customer Accounts Receivable
`Return Note / Credit Slip`	Original invoice verification	Negative adjustment voucher	Return bill audit ledger

4. Mid-Shift Safe Drops (Cash Skims)

To mitigate burglary and armed hold-up risks, cash drawers should never hold excess cash. When cash totals exceed **LKR 50,000** (or your store policy threshold), execute a **Cash Skim (Safe Drop)**:

Action: In the POS menu, select **'Cash Drop / Safe Transfer'**.

Process: Enter the skim amount (e.g., LKR 40,000), print the dual-voucher slip, place cash into the drop envelope, and deposit into the store drop safe with supervisor counter-signature.

5. End-of-Day Blind Balancing Procedure

Nexus ERP strictly enforces **Blind End-of-Day Balancing**. The system *never* displays the expected cash amount to the cashier before they enter their physical count. This prevents dishonest adjustments.

Step 1: At the end of the shift, the cashier locks the terminal and selects **'Close Shift & Balance'**.

Step 2: The cashier physically counts every note and coin in the till and inputs the exact denomination quantities into the blind count form.

Step 3: The cashier enters the total card settlement terminal batch slips and LankaQR totals.

Step 4: Once submitted, the system computes the variance: `Variance = Physical Count - (Opening Float + Cash Sales - Cash Drops - Paid Outs)`.

6. Cash Discrepancy Governance & Escalation Matrix

Cash variances must be managed based on statutory store policy thresholds to ensure ledger auditability:

Variance Range (LKR)	Classification	Action Required	Posting Ledger
Under LKR 100	Normal Rounding Variance	Supervisor auto-signoff allowed	Cash Discrepancy Expense
LKR 100 - LKR 1,000	Moderate Discrepancy	Till recount + written reason log	Store Variance Clearing Account
Over LKR 1,000	Severe Non-Compliance	Manager PIN override + Incident Report	Cashier Shortage Advance / Investigation

Immutable Audit Logging

All shift closures, supervisor overrides, and safe drop vouchers are recorded with microsecond timestamps and terminal IP addresses in the Nexus Platform Audit Ledger.
